

Instructions for Capstone Project 1 - Online Resume

Project Specifications

- 1) Create an HTML file named **index.html**.
- 2) Use the **<!DOCTYPE html>** declaration at the beginning of the file to indicate that it's an HTML document.
- 3) Create a **head** section that includes a **title** element with the text **"My Resume"**.
- 4) Inside the **body** section, write HTML code to create an online resume covering the following aspects:
 - a) **Summary** or objective statement
 - b) **Education** (list degrees, schools, and dates)
 - c) **Work experience** (list job titles, employers, dates, and responsibilities)
 - d) **Skills** (list relevant skills or areas of expertise)
 - e) Awards, certifications, or other achievements (list any relevant awards, certifications, or other accomplishments)
- 5) Use appropriate HTML tags to format the content of each section, such as **h1** for section headings and **ul** or **ol** for lists.

- 6) Use HTML tags to add a **profile photo** of yourself.
- 7) Use relevant anchor tags to create a multi-page website, listing other aspects of your resume such as **Hobbies** and **Contact** details.
- 8) Add a **footer** element with your name and any copyright information or other disclaimers. (Hint: use the MDN docs for things you don't know how to do: <https://developer.mozilla.org/en-US/docs/Web/HTML/Element/footer>)
- 9) Save the **index.html** file and open it in a web browser to ensure that it displays correctly.
- 10) Add your website to your GitHub to start building your portfolio.

Requirements

- In order to keep the project within scope (time, energy, resource), you can **only use HTML** to complete this project. Even if you know CSS and JS (which we're assuming you don't yet), you are expected to only write the website using HTML.

- Imagine you are a professional developer working on this project. There will be things you don't know, things you want to do but haven't yet learnt how to. As a professional developer, you need to know the limits of your abilities and look up other things in Google, MDN docs, the internet.

Example :-

Jane Doe
